

Saving the retirement of 36M American homeowners — and millions more worldwide

The Problem

65% of retirees are asset-rich and cash-poor. Their wealth is locked in residential property — the world's largest asset class — yet no financial institution offers a fit-for-purpose product to convert that equity into retirement income without selling the home, depleting equity, or sharing property appreciation. Existing products (reverse mortgages, shared appreciation mortgages) are expensive, predatory, and difficult to fund or securitise. This problem has been hiding in plain sight for 35 years.

\$25T Home equity in target markets	36M Under-funded US homeowner retirees	65% Of retirees are asset-rich, cash-poor	\$20T Locked in illiquid residential property

The Solution: Equity Preservation Mortgage®

FutureProof has designed a new index-linked mortgage referenced to the S&P; 500 that converts home equity into tax-efficient retirement income — without selling the home, depleting equity, or sharing property appreciation. All home wealth is preserved for future needs or family inheritance.

How it works:

- Borrower takes a 30-year mortgage secured against their home (up to 80% LTV)
- Mortgage capital is invested in passive S&P; 500 index ETFs via a segregated offset account
- Long-term index returns (~10% p.a.) pay all mortgage interest and costs on behalf of the borrower
- Surplus generates a tax-free annuity income of ~1.25% of home value p.a. for 10 years
- Built-in volatility buffer (80-120% collar) and mortgage insurance eliminate lender risk
- At maturity, the mortgage is repaid from the investment account — home equity fully preserved

The core insight: over any 30-year period, long-term equity index returns have reliably exceeded mortgage funding costs by 3-4% p.a. The EPM captures this spread through a proprietary investment structure validated by 50,000-path Monte Carlo simulation with a Probability of Claim under 5% in the optimised model.

Why Now

- Buffer ETF products now exist at scale, enabling efficient collar hedging
- Regulatory frameworks for novel mortgage products have matured (FCA sandbox, APRA innovation pathway)
- Reinsurance capacity for longevity and index-linked risk has expanded significantly
- Demographic pressure: dependency ratio now 2:1, governments shifting to user-pay models
- Technology: SaaS platform enables multi-jurisdiction deployment at low marginal cost

Business Model: B2B2C SaaS + Ecosystem

FutureProof is a B2B2C fintech platform. The EPM is embedded in our SaaS platform and licensed exclusively to regulated financial institutions (Product Issuers). Revenue is multi-layered and recurring:

Revenue Stream	Type	Mechanism
SaaS Platform Fee	Recurring (30yr)	25bps margin on each mortgage, life-of-loan
Profit Share	Periodic	20% of surplus drawn every 3 years
End-of-Term Surplus	At maturity	50% share of surplus at mortgage expiry
Capital Markets	Fee-based	Arranging fees, warehousing, securitisation
Insurance	Commission	Captive insurer, retained underwriting participation

Estimated lifetime gross revenue per mortgage: ~\$2.3M (30-year, undiscounted). NPV at 4.4%: ~\$1.2M per mortgage.

Traction & Partners

Global Collaboration: Accenture (approved business intermediary), Jones Day (global legal partner). **Product Co-Design:** PwC, BlackRock, Spiderock, Atlas SP/Apollo. **In Negotiation:** PIMCO, Macquarie, Munich Re, Gallagher Re, Lockton Re, Asia Insurance. **Pipeline:** 12 financial institutions across Australia, Asia, UK and USA as prospective Product Issuers.

The Ask

Raise	\$5M Late Seed (min. \$1M on SAFE)
Purpose	Sprint-to-market: complete SaaS build, fund AU launch, close first Product Issuer
Launch	Australia Q3 2026, UK Q2 2027, USA Q4 2027
Near-Term Target	\$100M loan book by end 2026 (~50 mortgages via first Product Issuer)
5-Year Target	20 Product Issuers across 3 markets
Founded By	Allianz alumni; bootstrapped \$3M + \$2M from Family Offices/HNW
