

MEET THE CAST

Five agents – four product, one master.

Four **product agents** each own one phase of the customer lifecycle, with zero overlap. A fifth – **Motoko** – is a different class: it builds and runs the platform and the other four.

The names are **internal codenames** – customers may never hear them.

**Akane****Customer Acquisition***Brings them in***Misato****Customer Communications***Talks to them***Rie****Back-Office & Business Ops***Runs the business***Yumi****Investment Manager***Runs investments*

Motoko – the master agent · Engineering & Operations · *builds and runs the platform and the four product agents above*. Human-supervised, internal only, and the most proven AI leverage we have today – **live now**. A different class from the four: not a step in the customer journey.

Akane

Customer Acquisition · the entire pre-customer surface

Internal codename – never spoken to the customer

TO BUILD

CHANNEL

Public web chat & voice · multi-region

WHAT AKANE OWNS

- Public-site chat: EPM mechanics, eligibility, FAQs, "is this for me?"
- Structured intake → **general** recommendation → compliance gate → adviser handoff
- Hands the prospect (full transcript & recommendation) to a licensed human adviser, who provides any personal advice
- Spans three layers: **L1** the chat surface · **L2** MCP/OpenAPI plumbing so other assistants can hand a prospect to FP · **L3** partnerships & marketplace position

⚠ **Boundary:** Akane gives *general advice only* – personal advice requires the licensed human adviser (an AI cannot hold a licence). Once a product is issued, Akane is done: comms → Misato, processing → Rie, the account → Yumi.

Misato

Customer Communications · post-issuance & ongoing

Internal codename – never spoken to the customer

REALIGNING

CHANNEL

Customer portal chat, email, in-app notifications

WHAT MISATO OWNS – EVERY COMM WITH A PAYING CUSTOMER

- Status updates, notifications, scheduled comms (statements, reviews, milestones)
- Inbound support questions from customers with active mortgages
- In-app chat & email for logged-in customers · multi-region
- Triage to a human when the question is outside her remit

⚠ **Boundary:** Not prospects (Akane), not processing (Rie), not the investment account (Yumi). Misato is the *voice* of the existing relationship.

Rie

Back-Office & Business Operations

Internal codename – never customer-facing

INTERNAL · PARTIAL

CHANNEL

Internal admin / staff dashboard ·
agent_type backoffice

WHAT RIE OWNS – EVERYTHING INSIDE THE BUSINESS

- Application processing: document verification, eligibility checks, settlement
- Business-operations workflows: reporting, reconciliation, audit, compliance ops
- Internal queries from staff, brokers, and partners
- Surfaces decisions & exceptions to humans for confirmation

⚠ Boundary: Rie does not talk to customers – ever. If a customer needs to be told something, it routes through Misato.

Yumi

Investment Manager · account lifecycle

Internal codename – never spoken to the customer

INTERNAL · PARTIAL

CHANNEL

Investment-management system ·
agent_type investment

WHAT YUMI OWNS – THE INVESTMENT ACCOUNT, END TO END

- **Setup:** account opening once an adviser has issued the product
- **Manage:** portfolio monitoring, rebalancing, performance tracking
- **End-of-life:** final settlement, residual handling, account closure
- Provides the data Misato uses to talk to the customer

⚠ Boundary: Yumi runs the account but does not talk to the customer directly – customer-facing communication goes via Misato using Yumi's data.

Motoko

Engineering & Operations · the master agent

Internal – a different class from the four product agents

LIVE TODAY

CHANNEL

Internal engineering & ops tooling · human-in-the-loop

WHAT MOTOKO OWNS – THE PLATFORM AND THE AGENTS THEMSELVES

- Builds and runs the codebase, infrastructure, and the four product agents
- Engineering velocity, deployments, monitoring, incident response
- Human-supervised: mandatory review, no autonomous production changes, full audit log
- The most proven, measurable AI leverage we have today – delivering now

⚠ **Boundary:** Motoko is not part of the customer journey and never talks to customers. It builds and operates the platform the four product agents run on.

HOW A CUSTOMER JOURNEY MOVES BETWEEN THEM – CLEAN HANDOFFS, NO OVERLAP

1 · Arrives & explores

Akane

Public-site chat: "What's an EPM?" "Am I eligible?" – and structured intake when they want a general recommendation.

2 · Adviser handoff

Human adviser

Akane hands across full transcript & recommendation. Adviser provides personal advice, confirms & issues.

3 · Processing

Rie

Internal: documents, settlement, business operations.

4 · Account opened

Yumi

Investment account set up & running.

5 · Active life

Misato + Yumi

Misato talks to the customer; Yumi runs the account behind her.

6 · End-of-life

Yumi

Final settlement, residual to estate, account closure.

Motoko sits behind every step – it builds and runs the platform this whole journey lives on. It is not a step in the journey itself.
