

Building the Next-Generation of Retirement Income & Funding Products for Every Life Stage.

Unlocking \$25T of locked-up retiree home equity. AI-native SaaS platform. AUS → UK → USA.

ROUND	STAGE	DOMICILE	DATE
SAFE	Pre-Series A	AU	May 2026

THE PROBLEM

2.7M Australians + 36M Americans are asset-rich and cash-poor – sitting on **\$25T** of home equity, served by no fit-for-purpose product in 35 years.

Australia

- 2.7M over-65s asset-rich, cash-poor
- Median home A\$900K · Median super A\$200K
- **Asset disparity = 4.5×**
- Told to "downsize" – most refuse (community, health, identity)

USA

- 36M retirees under-funded for retirement
- Avg net worth \$410K · Housing ≥50% of it
- **65% of US retirees forced into equity-eroding mortgage products**
- \$200K–300K avg home equity locked per US retiree

The same problem on two continents – and a \$25T asset class waiting to be unlocked.

WHY NOW

The Retirement Income Covenant just made this Australia's most important regulated tailwind.

- **2022:** Every super fund **legally required** to have a retirement income strategy
- **2020 Callaghan Review:** explicitly endorsed home equity release as a retirement tool
- **A\$3.5T** in super now needs retirement-phase infrastructure
- 1 in 4 Australians over 65 by 2050
- **4 years post-Covenant, most super funds still lack a credible solution.** That is our window.

THE SOLUTION

The Equity Preservation Mortgage[®] – a **breakthrough fit-for-purpose** retirement mortgage, embedded in an AI-native SaaS platform.

We are not a lender. We are the platform that turns home equity into guaranteed retirement income – and licenses banks, insurers, and non-bank lenders to issue the product.

- Retiree pledges home equity at up to 80% LTV – **no monthly repayments, no compound interest, no estate erosion**
- Capital invested in a structured portfolio (~70% equity ETFs / ~30% fixed income), hedged with an asymmetric collar (cap +40% / floor -20%) per v14d Optimised
- Tax-free annuity income to the retiree of **1.50% of home value p.a.** (10-year term) → **1.05%** (30-year term); **10% FP profit share** at 3-yearly resets; 50/50 split at 30-year maturity

Per Futureproof's proprietary EPM model parameters.

WHY BETTER THAN REVERSE MORTGAGES

Reverse mortgages eat the estate. EPM preserves it.

	Traditional reverse mortgage	EPM
Interest accrual	Compounds against the estate	None – no debt
Payment to homeowner	Lump sum or drawdown	Lifetime guaranteed income
End of term	Estate often consumed	Surplus split with homeowner
Funder economics	Interest spread	Mortgage income with equity-style returns
Alignment	Misaligned (longer = better for funder)	Aligned (better outcome = better for both)

Reverse mortgages address ~5% of the addressable retiree population. EPM is structured for the other 95% – the people who say no to reverse mortgages on principle.

Mean per-mortgage surplus at year-30: **\$1.17M (mean) / \$4.10M (99%-ile)**. Source: 50,000-path Monte Carlo (Futureproof's proprietary financial model, v14d Optimised parameters).

MODEL VALIDATION

Validated against 50,000-path Monte Carlo. Hard constraints C1–C6 satisfied across all sequences.

0.03

PoC year-30 – Portfolio Probability of Capital shortfall after Payments Waterfall (the headline risk metric)

7.7%

Per-mortgage PoD year-30 – under v14d Optimised parameters (asymmetric collar + multi-scenario fine-grid optimisation)

- **Run-off mechanism eliminates prepayment risk** to funders (no liquidity stress)
- Stress-tested against 1929, 1973, 2008 historical sequences and forward GBM stochastic scenarios

Source: Futureproof's proprietary financial model. 50,000-path GBM (mean ~9.4%, vol ~17.5%) with Ornstein-Uhlenbeck cash rate (long-run 2.13%, κ 0.24, σ 1.22%), asymmetric hedge collar (cap +40% / floor -20%), 30-year horizon.

MARKET SIZING

Homeowners of any age with unencumbered residential property.

\$25T

TAM: Home equity in target markets (USA, UK, Australia). Growing 4% YoY.

\$55B

SAM: Futureproof's potential market revenues estimated.

\$20B

SOM: Current reverse mortgage market.

DISTRIBUTION

B2B distribution: we license banks, insurers, and non-bank lenders as Product Issuers.

Partner Channels (via Accenture)

Top-tier financial-institution clients in the Accenture ecosystem.

Macquarie Bank · AMP Bank · Westpac · Barclays · Nationwide Building Society · Lloyds · SCB Bank (Thailand) · HSBC Private Wealth · Suncorp Insurance

FutureProof Direct

Mid-tier institutions and lenders outside the Accenture ecosystem.

Resimac · PepperMoney · Heartland Bank · US Bank · Allianz Life · Aegon · Aviva · AIA Insurance · Butterfield Private Bank · Hong Kong Mortgage Corp · FWD Insurance

"Mortgage income with equity-style returns" – what we offer the wholesale capital that funds the EPM book. Long-duration, insured, securitisable, with profit-share upside from S&P appreciation.

AI-NATIVE OPERATING MODEL

38 FTE running a multi-region, multi-billion AUM platform – by Year 5.

Leaning hard into AI to drive operating cost down without compromising customer service.

✔ Working prototype	✔ Infrastructure built	🟡 Roadmap (next 12 months)	✖ Never (regulated)
Customer-facing chat agent ("Akane") – Claude, 4 regions, proprietary-content guardrails	AI agent orchestration framework – tool use + prompt caching	Application triage (LLM-augmenting current rule-based service)	Underwrite credit decisions
Knowledge-grounded responses, escalation triggers, abuse detection	Agent task tracking, performance metrics, lifecycle management	Internal ops admin agents (review packs, exceptions)	Replace compliance sign-off
Region-aware content for AU/US/NZ/UK	3 agent types: applications, backoffice, investment	Multi-region marketing content; CS triage at scale; Investment-ops workflow	Generate investment alpha; shorten regulatory licensing

~14 bps

Opex per AUM at Y3 (Likely). Y5: ~7 bps.

50–80 bps

Comparable specialty insurer. AI-ops layer absorbs ~250 FTE-equivalents at Y3.

TRACTION

Building a global ecosystem of top-tier institutional partners.

- **Accenture** – US Global Collaboration Partner & Approved Business Intermediary
- **Jones Day** – US Global Legal Partner
- **Product co-design:** BlackRock · SpiderRock · Atlas SP / Apollo · Lockton · PWC
- **Regulatory partners** (non-US): EY · Colin Biggers & Paisley · Dentons
- **In active negotiation:** Lockton Reinsurance · Gallagher Re · PIMCO (US); Munich Re · Macquarie · Asia Insurance Co (non-US)
- **Product:** Multi-region calculation engine live (AU, NZ, UK, US); Annuity & Mortgage Calculator in **alpha release**; 382 integration tests passing
- **AI:** Customer-facing AI agent ("Akane") working prototype with proprietary-content guardrails (multi-region)
- **Recognition:** Silicon Valley Fintech Accelerator (FinAccelerate, powered by Jones Day) – 2023 cohort
- **Market launch:** AUS Q4/2026 → UK Q2/2027 → USA Q4/2027

BUSINESS MODEL

Five revenue streams. Software-margin economics on a regulated-finance asset base.

Revenue stream	Source	Y3 (USD)	Y5 (USD)
1. Onboarding tech fee	\$1.5M per licensee, one-off	~\$4.5M	~\$6M
2. SaaS recurring (FP margin)	50 bps × cumulative book	~\$115M	~\$455M
3. Profit share at 3-yr resets	10% of running surplus	\$0 (first reset Y4)	~\$170M
4. Capital markets arranger	20% × 75bps × \$100M new lines / licensee / yr	~\$1M	~\$2M
5. Other (interest, captive insurance)	–	~\$0.4M	~\$0.8M
Total revenue (Likely)		~\$121M	~\$633M
EBITDA margin (Likely, recurring / blended)		~74% / 74%	~85% / 89%

\$162M

Conservative Y5 revenue

\$633M

Likely Y5 revenue

\$2.46B

Optimistic Y5 revenue

All figures USD. Source: Financial Model (P&L_Likely / Summary_3Case). Pricing inputs aligned to v14d Optimised EPM product spec.

COMPETITIVE LANDSCAPE

The AU competitive landscape – and why we win.

Household Capital, Heartland

Reverse mortgages. Interest-bearing, eat estate. Address ~5% of retiree market. We don't compete; we serve the other 95%.

Challenger annuities

Annuitise super, not home equity. Different problem, different share-of-wallet. Possible strategic partner, not competitor.

Pension Boost (Pension Loans Scheme)

Government-rate-capped, drawdown-only, limited.

Banks

APRA capital rules under APS 112 make originating these uneconomic for ADIs.

Why we win: product structure (no compounding debt), regulatory tailwind (Covenant), AI-native distribution-first model, and a 6× larger addressable market because we serve the 95% who reject reverse mortgages.

THE TEAM

Founder + senior actuaries – the credibility anchor.

FOUNDER & SENIOR ACTUARIES

John R Innes

Co-Founder & Executive Director

30+ yrs insurance/insurtech (APAC, USA). Former Head of Product, AU's largest insurer. Co-founded, scaled & exited a leading digital insurer. Ex-Allianz NCM (\$750M+ premium portfolio).

Dr Pavel Shevchenko

Senior Actuary, Quantitative Risk

Author of Futureproof's proprietary financial model. Professor (Actuarial Studies & Business Analytics) Macquarie U. Ex-Principal Research Scientist CSIRO. Director, Centre for Financial Risk.

John De Ravin

Senior Actuary, Insurance Risk

Ex-Director Swiss Re. Ex-Chief Actuary Munich Re. Senior actuary roles at CommInsure & MLC Life. Ex-member Australian Government Actuary.

LEADERSHIP

Wesley Chow

CFO

30+ yrs CFO / Finance Director. Ex-KPMG, BEA Systems, CustomWare.

Matt Stone

CTO

20+ yrs regulated financial systems. Former CTO across fintech & trading platforms (London, LA, Tokyo, Sydney).

BANKING, INSURANCE & ADVISORY • QUANT & DATA

James Huey

Chairman

Ex-Westpac Head Retail/Commercial Banking. 15-yr Director Resimac (AU's first RMBS issuer).

Dr Peter Langkamp OAM

AU Platform/Product

Ex-Director Accenture (Banking & Government). Ex-CEO Novare. Ex-Director Acxiom.

Ian Holt

UK Insurance/Reinsurance

Ex-Head of Europe, Aviva. Ex-Senior Leader Accenture Insurance.

Dr Tom Neilsen

Data Scientist

Ex-Director OpenBrain AI. Ex-Research Associate Harvard Medical School. Owns the LLM agent + ML roadmap.

THE ASK · INVESTOR TERMS – PRE-SERIES A SAFE

Post-money SAFE · Uncapped · 30% discount to Series A 2028.

\$1M

Minimum investment · USD-denominated · AU-domiciled corporate

30%

Discount to Qualifying Round (Series A Growth Equity, scheduled 2028) · reduces progressively as each SAFE issued

∞

Uncapped valuation · pricing event is Series A 2028

OTHER TERMS

- **Side letter** for follow-on investment to maintain equity position · **MFN terms** · **No lead** · **Rolling close**
- **ESOP at Series A** = 5% issue of new shares + 5% purchase of founder shares
- Use of funds – **AUS launch (Q4/2026)** · **AI roadmap delivery** · **Working capital + key hires** (~18mo runway to Series A 2028)

ESVCLP allocation available for qualifying AU investors via parallel AUD sub-tranche on the same SAFE terms (10% offset + CGT exemption). Main USD SAFE open to global investors regardless of ESVCLP status.

In 10 years, every retiree across the AUS / UK / USA target markets should have a credible answer to *"how do I turn my home into income without losing it."*

*We're building that answer. The regulator agrees it should exist. The demographics make it inevitable. The AI-native SaaS platform makes it operable at scale by a small disciplined team. **The question is who builds it first.***

Why this might not be your fund – and why we want you to say so on the first call, not the fourth.

1. **Fund-return math.** Specialty insurance / asset management economics, not SaaS. Path to 10-50× equity is platform AUM growth + strategic / IPO exit, not ARR multiple expansion.
2. **Time to outcome.** 7-10 years to exit. Doesn't fit a 5-year-from-investment exit assumption.
3. **Capital intensity.** We don't warehouse risk, but we depend on wholesale funder partners. Closer to fintech-marketplace + capital-markets than to pure software.
4. **Regulatory surface area.** ASIC (AU), FCA-equivalent in expansion markets. The Covenant tailwind doesn't shorten licensing timelines.
5. **Mixed comp set.** UK equity-release names (Just Group, Pure Retirement) have bumpy public histories. Product structure is fundamentally different – but a 5-minute pattern-match goes against us.
6. **Market education burden.** Borrowers AND super funds need education. Sales cycle is quarters for super-fund integration. Not a viral / PLG curve.
7. **AI is operating leverage, not a moat we claim.** AI gives us no credit-underwriting edge, no regulatory shortcut, no investment alpha.

If any of the above is a hard veto for your fund, please say so on the first call. We're raising from people for whom these tradeoffs are features, not bugs.

Realistic exit window: 7–10 years. Three credible buyer types.

1. Super fund consolidator / aggregator

Most likely

Retirement Income Covenant compliance + member retention. Buying turnkey is faster than building.

2. Life insurer / annuity provider

Challenger · TAL · MLC Life · Generation Life

EPM is the home-equity counterpart to the annuity. Strategic gap, publicly acknowledged.

3. IPO at scale

Less likely, longer-dated

AUM-driven specialty finance. Heartland Group is the AU-listed precedent. Trigger is A\$XB+ AUM, 3 yrs operating history.

We don't model around a specific exit. We model around being a durable cash-generative business – the exit options follow from that, not the other way around.

Sequential market entry. Each market unlocked by validated learning from the prior.

Market	Launch	Why
AUS	Q4 2026	Lead market. ASIC approvals, NCCP licensing path. 1-2 super fund partnerships. Wholesale facility executed. Multi-region calculation engine already live.
NZ	2027	Lowest-friction expansion. Similar regime to AU; ~6-month licensing. KiwiSaver providers face equivalent retirement-income pressure.
UK	Q2 2027	Mature equity-release market, different mechanic. FCA. Equity release is a regulated category. Distribution: equity-release advisers + IFA networks. Comp: Pure Retirement (Sun Life), Just Group, More2Life.
USA	Q4 2027	Largest TAM, different regulation. State-by-state – handled via licensing partner. Distribution: RIAs + bank wealth platforms.

We don't promise a 4-market business at Series A. We promise AUS at scale + 1 expansion market validated. The other two are optionalities the platform already supports.

What's defensible, what's not, and why distribution + permissions is the real lock.

Defensible (the moat)

- Regulatory permissions stack (multi-jurisdictional licensing – 18-36 months to replicate)
- Super fund integrations (relationship-driven, slow to build, embed once and load-bearing)
- Futureproof's proprietary financial model + actuarial validation (years of model refinement, hard-constraint compliance C1-C6)
- AI-native operating layer (embedded in workflow, not bolt-on)
- Multi-jurisdictional product structure (single calculation engine across 4 regions)

NOT defensible (state explicitly)

- The product mechanic itself – could be copied. **The mechanic is not the moat.**
- The technology stack – modern but commodity-ish.
- The team – replicable.

Distribution + permissions + operational AI layer compound. A copycat needs all three to compete; missing any one and the economics don't work. A new entrant in 2027 starts a 24-month build to reach our 2026 starting line.
