

Akane – Intake Flow (State Machine)

Customer-facing conversation: greeting → recommendation → adviser handoff

May 2026

FutureProof Financial Group

STATE	PROMPT / WHAT AKANE DOES	UI ELEMENTS	WHAT'S CAPTURED	NEXT STATE · BRANCHING
1 Entry	Akane introduces herself, sets capability boundary, asks user to opt-in to text or voice. "I'll ask 10 questions, ~10 min, then show you what I'd recommend."	Persona block (avatar + name) · Two CTAs: 'Start (text)' / 'Start (voice)' · Always-visible 'Talk to a human'	Channel choice · session ID · jurisdiction inferred from URL/IP	→ State 2
2 Demographics	Age. Retired or planning to retire? Dependents? Life-expectancy view (optional, sensitively framed).	Numeric input (age) · Date picker (retire date) · Dropdown (dependants count)	Age, retirement status, dependants	→ State 3 · Branch: if age < 50 → soft exit with general info
3 Home	Home value. Mortgage outstanding? Property location (region for jurisdiction).	Currency input with slider · Address lookup (auto-fill region) · Yes/No + currency for mortgage	Home value, region, outstanding mortgage	→ State 4 · Branch: if region not supported → adviser-only path
4 Other assets	Super / pension balance. Other investments (shares, ETFs, property). Cash on hand.	Currency inputs grouped · 'Skip' allowed for any line	Super balance, investments, cash	→ State 5
5 Income needs	Monthly income desired. Lump-sum needs (e.g. renovation, family). Time horizon (years of income).	Slider for income · Optional fields for lump sum · Slider or dropdown for horizon	Income target, lump sum, term	→ State 6
6 Priorities	Estate vs income trade-off. Risk tolerance. Family considerations.	Slider (estate ↔ income) · Multi-select for risk · Free-text for family notes	Estate priority weight, risk tolerance, qualitative notes	→ State 7
7 Synthesis	Akane calls the calculation engine. Visible thinking state: "Calculating 50,000 scenarios for your situation..."	Progress indicator · Inputs ledger visible alongside	(recommendation generated; 3 alternatives ranked)	→ State 8
8 Recommendation	Primary recommendation card with mini-chart of estate distribution. Two alternatives shown as smaller cards. "Why this one?" expandable.	Recommendation card (metrics + chart) · Alternative cards · Expandable reasoning	User reads · Akane logs presentation event	→ State 9 (or skip to 10 if user clicks 'Book adviser now')
9 Exploration	Free-form conversation. "What if I want \$25K/yr instead?" / "What about my kids' inheritance?" Akane re-runs scenarios in real time.	Chat input · Inline sliders to adjust inputs · Scenarios update without page reload	Iteration log: every input change + Akane's response	→ State 10 when user signals satisfaction ("book the meeting" / explicit CTA)
10 Compliance gate	Akane states explicitly: "This is general guidance based on what you've told me. A licensed adviser must confirm before any product issuance."	Acknowledgement check (non-skippable) · Audit trail visible · Disclosure language per jurisdiction	Acknowledgement timestamp + IP	→ State 11
11 Handoff	Akane offers next available adviser slots. Books the meeting. Sends conversation summary to the adviser AND to the customer's email.	Calendar widget (3 slots + 'more times') · Email confirmation · Optional family-share toggle	Slot booked, contact details captured, summary emailed	→ Done · Adviser pre-briefed before meeting

Cross-cutting design rules. Every state must support: **Save & resume** (state persisted to user account or anonymous session) · **'Talk to a human' 1-click escape** · **Edit prior inputs** (intake ledger visible throughout) · **Visible compliance status** (recording notice + jurisdiction-correct disclosures).

Compliance gating. States 1-9 generate guidance. State 10 is a hard gate – Akane cannot recommend product issuance without acknowledgement and adviser handoff. **Audit trail** captures: every input change, every recommendation presented, the acknowledgement timestamp, and the booking confirmation.

Localisation. States 2-6 accept jurisdiction-aware inputs (super for AU, workplace pension for UK, 401(k) / IRA for US). State 8 produces a recommendation in the local product-spec variant of EPM. State 10 uses the local regulatory disclosure language. State 11 books advisers from the local network.
