

Building the Next-Generation of Retirement Income & Funding Products for Every Life Stage.

*Unlocking \$25T of locked-up retiree home equity. AI-native SaaS platform.
Regulated tailwind. AUS → UK → USA.*

INVESTOR TEASER · VENTURE CAPITAL

The market structure unlock. The 2022 **Retirement Income Covenant** legally requires every Australian super fund to have a retirement income strategy for members. Four years on, **most still don't have a credible solution**. The 2020 Callaghan Review explicitly endorsed home equity release as the answer. We're building the turnkey solution super funds can offer their members – a **B2B2C distribution play with a regulated A\$3.5T tailwind** and no incumbent.

The product. The Equity Preservation Mortgage® (EPM) converts retiree home equity into a stable lifetime income – no monthly repayments, no compound interest, no estate erosion. Capital is invested in a structured portfolio (~70% equity / ~30% fixed income) with asymmetric hedge collar (cap +40% / floor -20%); run-off mechanics eliminate prepayment risk to funders. **Validated by 50,000-path Monte Carlo (Futureproof's proprietary financial model):** PoC year-30 = **0.03 (3%)** portfolio capital shortfall probability. Mean per-mortgage surplus year-30: **\$1.17M (mean) / \$4.10M (99%-ile)** (USD).

The venture-scale thesis: AI-native operating leverage. We are leaning hard into AI to operate a regulated financial-services business at software-company cost – without compromising customer service. **By Y5: 38 FTE running multi-region, multi-billion AUM.** Working prototype: customer-facing AI agent (Claude, 4 regions, proprietary-content guardrails). Built: agent orchestration + 3-type agent infrastructure (applications / backoffice / investment). Funded roadmap (next 12 months): LLM-augmented application triage, ops admin agents, multi-region marketing content, CS triage at scale, investment-ops workflow. **Opex per AUM at Y3: ~14 bps vs 50-80 bps for comparable specialty insurer.** AI doesn't underwrite, doesn't replace compliance, doesn't generate alpha – it absorbs the work *around* regulated decisions. Full breakdown: [ai_architecture.md](#).

Unit economics – 3 cases (USD, Y5 total revenue):

- **Conservative: \$162M** Y5 revenue · DCF EV \$1.46B – Y1 sales miss + 6% equity + slow USA launch
- **Likely: \$633M** Y5 revenue · DCF EV \$5.97B – on-plan execution + 8% equity (defensive vs 10% historical)
- **Optimistic: \$2.46B** Y5 revenue · DCF EV \$27.5B – strong execution + 10% equity (LT historical)
- EBITDA margin: ~74% Y3 → ~89% Y5 blended (we earn fees on funder capital – we do not warehouse loans)

Why this is a hard sell for many VCs (read first). (1) Specialty-insurance economics, not SaaS – path to 10-50× depends on AUM growth + strategic exit, not ARR multiple expansion. (2) 7-10 year exit window. (3) Capital-stack-dependent – we don't warehouse risk, but we rely on wholesale funder partners. (4) AI is operating leverage, **not** a moat we claim. **If any of these is a hard veto for your fund, please tell us on the first call. We'd rather close the loop fast than burn 4 weeks of process.**

The raise – Pre-Series A SAFE round. Post-money SAFE · uncapped valuation · 30% discount to the Qualifying Round (Series A Growth Equity Round, scheduled 2028). **Minimum investment USD \$1M**, USD-denominated, AU-domiciled corporate. Discount **reduces progressively** as each SAFE is issued – earliest investors capture the full 30%. Side letter for follow-on / pro-rata. MFN terms. No lead. Rolling close. ESOP set at Series A (5% new shares + 5% from founder shares). Use of funds: AUS market launch (Q4/2026) + first 1-2 Product-Issuer partnerships + AI roadmap delivery + 18-month runway to Series A 2028. ESVCPLP allocation available for qualifying AU investors via parallel AUD sub-tranche.

Team.

- **John R Innes** (Co-Founder & ED) – 30+ years insurance / insurtech APAC+USA; former Head of Product at AU's largest insurer; ex-Allianz NCM (\$750M+ portfolio); co-founded, scaled & exited a digital insurer
- **Senior Actuaries** – **Dr Pavel Shevchenko** (Professor, Macquarie U; ex-Principal Research Scientist, CSIRO; Director, Centre for Financial Risk) and **John De Ravin** (ex-Director Swiss Re; ex-Chief Actuary Munich Re; ex-member Australian Government Actuary). Authors / validators of Futureproof's proprietary financial model.
- **Matt Stone** (CTO) – 20+ years building regulated financial systems; former CTO across fintech & trading platforms (London, LA, Tokyo, Sydney). Owns the AI architecture ([ai_architecture.md](#))
- **Dr Tom Neilsen** (Data Scientist) – predictive analytics + computational neuroscience; ex-Director OpenBrain AI; ex-Research Associate Harvard Medical School. Owns the LLM agent + ML roadmap
- **Wesley Chow** (CFO) – 30+ years CFO / Finance Director; ex-KPMG, BEA Systems, CustomWare
- **Quant + investment:** Dr Anthony De Francesco (ex-Head of Research Colonial First State Global Asset Mgmt; Principal Real Investment Analytics)

Advisors / Board:

- **James Huey** (Chairman) – ex-Head Retail & Commercial Banking, Westpac; 15-yr Director Resimac (ASX-listed; AU's first RMBS issuer)
- **Dr Peter Langkamp OAM** – ex-Director Accenture (Banking & Government); ex-CEO Novare; ex-eCommerce Lead Bendigo & Adelaide Bank
- **Ian Holt** (UK insurance/reinsurance) – ex-Head of Europe, Aviva Insurance; ex-Senior Leader Accenture Insurance
- **Tom Hamilton** (UK platform & product issuers) – 25+ years building/scaling startups; deal-maker with PE, family offices, venture funds

Existing institutional traction.

- **Accenture** – Global Collaboration Partner & Approved Business Intermediary (US)
- **Jones Day** – Global Legal Partner (US)
- **Product co-design:** BlackRock, SpiderRock, Atlas SP / Apollo, Lockton, PWC
- **In active negotiation:** Lockton Re, Gallagher Re, PIMCO, Munich Re, Macquarie, Asia Insurance Co
- **Silicon Valley Fintech Accelerator (FinAccelerate, powered by Jones Day)** – 2023 cohort
- **Market launch sequence:** AUS Q4/2026 → UK Q2/2027 → USA Q4/2027

The ask. A 30-minute first call. We'll walk through market structure, Futureproof's proprietary financial model validation, the AI architecture (working prototype + roadmap), the existing partner ecosystem, and the honest-disclosure block. Data room available under NDA after a productive first conversation.
